

# Making A “Well” Of A difference

I am Finley Richmond, a native of Haiti and now I am a PhD candidate in chemical and biological engineering at the University Of Maine (UMO). I am in the process of developing a water filter that will be able to help the people in third world countries. As the process takes time and energy, meanwhile I want to start by digging a Well of a difference. 100% of the proceeds go to the construction of a water well in **Gros -Morne, Haiti**. The city does not have running water. When it does get water, it is contaminated and not clean. The well will provide **CLEAN water for ALL** of the people in **Gros-Morne**. (Donations also are gladly accepted).

Imagine life without any running water. Any water that is available is polluted and full of pathogens, and people are dying with **Cholera** and more. **Please know that donations, and support are really needed.** All funds collected will benefit thousands of people living there and other places.
